

CONTENTS

11 Introduction

12 SECTION I: OVERVIEW

13 **OVERVIEW: Biomass: mobilising a sustainable resource** by McKinsey authors Bill Caesar, Nicolas Denis, Stefan Fürsinn, Kerstin Graeser, Ulrike Kempkes, Jens Riese and Alexander Schwartz

Key topics

- What is biomass?
- Biofuels – questions over sustainability
- High hopes for next generation of feedstocks
- Strong demand growth forecast
- Availability of land
- Defining sustainability criteria
- Four major biomass-based industries
- Major drivers of bioenergy demand
- McKinsey's biomass and land-use model
- Challenges to overcome
- Business opportunities in biomass

Tables & Figures

- Biomass pathways for heat, power and fuel
- Shares of biomass demand, by application, 2020
- Base GHG emissions savings by application, 2020
- McKinsey's integrated biomass and land-use model
- Mandated biomass demand for energy applications (1990–2020)
- Annual supply mobilisation potential, 2020
- GHG balance defined by operational emissions and land-use change
- Business opportunities across the value chain
- Profile of a potential major biomass company

22 **OVERVIEW: Bioenergy production and sources** by Prof Bruce A. McCarl

Key topics

- Ethanol – first and second generation
- Biodiesel and by-products
- Electricity from biomass
- Pyrolysis
- Review of major feedstocks
- Food prices and poverty
- Energy prices as a driver
- Technology challenges

26 SECTION 2: NATIONAL & INTERNATIONAL DEVELOPMENTS

27 **BRAZIL: Biodiesel set to repeat ethanol's huge success** by Rodrigo Squizzato

Key topics

- Biodiesel growth targets
- Tax incentives
- Implementation problems
- Feedstock options
- Regional differences
- Overcapacity issues
- Export potential

Tables & Figures

- Biodiesel taxes in Brazil, by region
- Various crops' oil yields
- Brazilian supply of biodiesel, by region
- BNDES lending to sugar and ethanol industry
- Brazilian states' biodiesel production capacity

31 **BRAZIL: New approaches could increase biofuel output** by Rodrigo Squizzato

Key topics

- Ethanol productivity gains
 - historical
 - future prospects
- Fermentation – best practice
- Mechanical harvesting
- Dry cleaning sugar cane
- Electricity generation potential
- Biodiesel options at ethanol plants

Tables & Figures

- Sugar cane mill production flow
- Productivity improvements at Brazilian sugar cane mills
- Brazilian sugar cane mill productivity evolution
- Mechanical harvesting in São Paulo state

34 **CHINA: Exploitation of biomass fraught with difficulties** by Joshua Speckman

Key topics

- Beijing's renewable energy goals
- Favourable tariffs for biomass power
- Obstacles to growth
- Feedstock supply challenges
- Carbon credit revenues essential
- Barriers to foreign investments

37 **CHINA: Biofuel industry faces feedstock uncertainty** by Joshua Speckman

Key topics

- Mandates for non-food feedstocks
- Questions over land availability

Mid- and long-term biofuel targets
Cassava, sweet sorghum and jatropha
Outlook for cellulosic ethanol
Benefits for the rural economy
Waste oil or biodiesel

Tables & Figures

Three-phase NDRC plan for China's biofuel development
Locations of China's ethanol and biodiesel projects
Ethanol plants operating and planned in China
Biodiesel plants operating and planned in China

44 USA: Potential, policy, and economic/climate change concerns

by Prof Bruce A. McCarl

Key topics

Ethanol subsidies
Biodiesel subsidies
Renewable fuel mandates (2005 & 2007)
Differentiated targets for different biofuels
Impact on commodity prices
Impact on the agricultural economy
Concerns over land-use change
Assessing GHG emission reductions
Overall policy context/issues

Tables & Figures

Ethanol production and capacity (1999–2008)
US spot petroleum price (1999–2009)
Biodiesel production (1999–2008)
US average corn price (1998–2008)
US average soybean oil price (1998–2008)

51 USA: Ethanol companies could clean up in carbon trade by Don Hofstrand

Key topics

Renewable fuel production as a manufacturing industry
Technology improvements expected
Greenhouse gas emission reductions required from US biofuels
Agriculture as a source of emission reduction credits
Reducing the carbon footprint of maize ethanol production
Carbon sequestration
Curbing fertiliser emissions
Charcoal and renewable ammonia
Renewable power for ethanol plants
Cap-and-trade as a revenue driver for agriculture

54 USA: Commodity futures can steady prices and profits by Matt Campbell

Key topics

Price risks in ethanol production
Futures contracts for feedstocks

- High volatility in feedstock and fuel prices
- Risks of not hedging
- Exchange-traded futures
- Risk transfer and price discovery
- Managing the 'crush margin'

Tables & Figures

- Commodity costs since 2000
- Average price risk since 2004

57 GERMANY: Policies, pitfalls, and prospects by Tobias Pleninger

Key topics

- Enthusiasm turns to scepticism
- Drivers of bioenergy growth
- Feed-in tariffs, targets and subsidies
- Energy and agricultural policy
- Policies for power, heat and transport
- Bottom-up, local initiatives
- Recent growth in bioenergy and biofuels
- Future biomass potential

Tables & Figures

- Political targets for renewable energy supply
- German energy supply from renewable resources

64 GERMANY: Showing the way in developing biogas by Claus-Henning Schmidt

Key topics

- Market drivers for biogas
- Agricultural benefits
- Investment appeal
- MW-size projects preferred
- Steady cashflow from constant power
- Managing operating costs
- Biogas potential outside Germany

Tables & Figures

- Growth rate of biogas industry in Germany
- Epuron's biogas projects in Germany

67 AFRICA: Biofuels investments face large challenges without legislation by Cornelis van der Waal

Key topics

- Limited production at present
- Zimbabwe – greatest potential?
- Jatropha in Kenya
- Tanzania – ambitious growth plans
- Ghana – a cautious approach
- Malawi – looking to sugar cane
- Mozambique – following Brazil
- Zambia – boosting feedstock production
- Slow progress in South Africa

Investment awaits legislation

Tables & Figures

Biofuel market potential in 2010 for sub-Saharan countries

Key barriers to biofuels growth in Africa

70 AFRICA: Sustainable Bioenergy Development in West and Central Africa

Executive summary from The Economic and Monetary Union of West Africa (UEMOA) Report

Key topics

Importance of agriculture in West Africa

Traditional biomass and deforestation

Domestic resources for modern bioenergy

Market drivers for bioenergy in West Africa

Blueprint for Action on Bioenergy (2009–11)

Policy recommendations

Public and private sector finance needs

Bioenergy as an engine of growth

Tables & Figures

The Economic and Monetary Union of West Africa (UEMOA)

Distribution of end-use energy consumption in the UEMOA zone

Potential bioenergy feedstocks in UEMOA countries

78 SECTION 3: SUSTAINABILITY

79 SUSTAINABILITY: Biofuels – less of a silver bullet than a silver lining

by McKinsey authors Bill Caesar, Nicolas Denis, Stuart Farmer, Jeremy Oppenheim, Jens Riese and Ulrich Weihe

Key topics

The sustainability debate

Growth forecasts for 2020

In praise of sugar cane ethanol

Worries over water use

Maize-based ethanol

– impact on food prices

– Chinese clampdown

Concerns over palm oil for EU biodiesel

Outlook for lignocellulosic ethanol

Economics against biomass-to-liquids

Managing sustainable growth

Tables & Figures

Wave 1 and Wave 2 biofuel technologies

Economic and other impacts of different biofuels

83 SUSTAINABILITY: Methods of production and use matter strongly by Matt Georges

Key topics

Is biomass a good thing?

Biomass Environmental Assessment Tool
Putting numbers on sustainability
Wide variations in greenhouse gas emissions
Transport and fertiliser problems
UK goals for GHG emissions from future power generation
Land-use change implications
Combined heat and power – needs more incentives

Tables & Figures

Greenhouse gas emissions from different biomass fuels
Greenhouse gas emissions – comparing best and worst practice

86 SUSTAINABILITY: Environmental impacts of bioenergy expansion in the European Union (from EEA Report 2008)

Key topics

Sustainability challenges
Technical EU bioenergy potential
Environmental impacts
Scenario analysis – fuel/carbon prices
Potential energy/GHG savings in 2020 and 2030
Key assumptions

Tables & Figures

Analytical framework of EEA study
Environmental assumptions implicit in the assessment of biomass potential
Bioenergy deployment as % of gross sectoral demands (electricity, heat and transport)

90 SUSTAINABILITY: The challenge of biofuels to the human right for food by Asbjørn Eide

Key topics

FAO Study on the Right to Food
How biofuels undermine access to food
Impact on food prices
Land concentration
Competing demands for water
Public support for biofuels
GHG emissions – no benefits?
Energy security – a modest contribution?
Recommendations for action

94 SUSTAINABILITY: Certification promises big boost for biomass suppliers by Edgare Kerkwijk

Key topics

EU targets imply biomass imports
Sustainability criteria for imports
Rational vs EU criteria
GHG reduction targets
Potential revenue from carbon credits
Premium prices are possible for sustainable biomass

Tables & Figures

European sustainability criteria for biomass

97 SUSTAINABILITY: Sustainability criteria will not help the poor by Helena Paul

Key topics

- Adverse impacts of EU targets
- Shortcomings of standards
- Obstacles to certification
- 'Track and trace' vs 'book and claim'
- 'Meta standards' approach
- Marginal lands – not so marginal?
- WTO – an excuse for weak certification?
- Jatropha – creating conflict

100 SECTION 4: FEEDSTOCKS

101 WOOD: Forest products industry could be an energy giant by John Bingham

Key topics

- Bioenergy – opportunities and threats to forest product companies
- Impact on wood prices
- Energy prices vs pulp prices
- EU imply soaring demand for 'energy wood'
- US demand also set to rise
- Increased trade in biomass likely
- Forestry companies eye opportunities

Tables & Figures

- Intrinsic energy value of wood against market price of pulpwood
- European Union and North American availability of woody biomass

104 FEEDSTOCK: Focus on raw materials could reap big rewards by Anna Rath

Key topics

- Feedstock – availability, cost and quality
- Long-term supply contracts
- Opportunities for supply companies
- Lack of data on energy crops
- Importance of raising crop yield
- Optimising feedstock composition
- Homogeneity vs flexibility
- Biorefinery criteria in selecting feedstock

Tables & Figures

- Better crop yields reduce feedstock costs
- Energy balance ratio (energy delivered to customer/fossil energy used)

108 FEEDSTOCK: Alien Alert – plants for biofuel may be invasive by Geoffrey Howard and Silvia Ziller

Key topics

- Defining invasive species
- Case studies
 - mesquite

- African oil palm
- Characteristics of invasability
- Invasability of biomass plants
- Risk assessment protocols
- Best practice recommendations
- Tables & Figures*
- Species currently promoted for biofuels that are known to be highly invasive in some circumstances
- Examples of questions in risk assessment protocols

112 SECTION 5: REFERENCES

115 SECTION 6: GLOSSARY
